

Kenya's Community-Led Circular Economy

Protecting Lake Victoria · Creating Green Jobs · Scaling Waste Recovery

Norah Gakii Nyagah | Executive Director | info@safishanchi.co.ke

Waste is not the problem. Lost opportunity is.

Safisha Nchi exists because no child should grow up surrounded by plastic waste while thousands of people remain unemployed. We transform environmental hazards into dignified economic value.

The Geography of a Plastic Crisis

Lake Victoria at Risk

The world's largest tropical freshwater lake supports 40M people. It is currently under severe, unchecked plastic pressure.

Systemic Bypass

Formal recycling concentrates in Nairobi. Secondary cities like Kisumu are structurally bypassed, leaving a <10% national recycling rate and 1M+ tonnes of uncollected plastic annually.

The Human Cost

150,000+ informal waste pickers across Kenya operate in hazardous conditions without registration, fair pay, or PPE.

The Solution: The Buy-Back Centre (BBC) Model

Inside the Operation: From Waste to Commodity

"We know Kenya's waste system from the inside—from picker registration to baler operation to recycler negotiation."

Formalizing the Informal

150+

pickers registered and trained.

40+

direct jobs created at the BBC.

Investors remember people,
not just statistics.

Mary's Story

Before: Mary earned KES 150 per day working in hazardous dumpsites without protection.

After: Integrated into the Safisha network, Mary now earns up to KES 600 per day. She receives full PPE, quarterly health check-ups, and is able to pay her children's school fees.

Verified Traction & Environmental Impact (2022–2024)

360+ Tonnes

of recyclable plastic collected and diverted from nature.

270t CO₂e

emissions avoided through diversion.

5.5 Million+

views and impressions from community awareness campaigns.

550

sets of PPE distributed to waste pickers.

Publicly Verified by the Kisumu County Director of Environment: Safisha Nchi directly contributed to raising Kisumu's citywide recycling rate from 4% to 10%.

Our Unbreakable Competitive Moat

Others buy plastic. We build community infrastructure.

This deep local integration guarantees a loyal, high-volume supply chain at zero acquisition cost—something industrial competitors simply cannot replicate.

The Competitive Landscape

	Safisha Nchi	Mr Green Africa	RETEC Fibre	TakaTaka Solutions
Focus on Secondary Cities	Yes (Core)	No (Nairobi)	No (Thika)	No (Nairobi)
Deep Community Integration	High	Low	None	Medium
Direct Picker Pay (No Brokers)	Yes	No	No	Employs staff
Operates BBC Infrastructure	Yes	No (Aggregator)	No (Industrial)	No (Household)

A Diversified, De-Risked Business Model

1. Domestic Plastic Sales

Selling sorted PET/HDPE to major off-takers (Mr Green, RETEC, T3 EPZ) at KES 25–50/kg.

2. Cross-Border Export

Exporting cleaned flakes to Uganda (~10t/month at KES 40–50/kg).

3. EPR Aggregator Revenue

Formally designated as an EPR node; receiving KES 100,000/month from the KEPRO fund.

4. Training & Capacity

Fee-for-service waste picker training for NGO/donor clients (NLMA, GIZ).

5. Carbon Credits

Voluntary carbon market pipeline established on 270t CO₂e baseline (tradeable from Year 2).

Market Opportunity & Macro Tailwinds

Why Now?

NEMA EPR Regulations: Government mandates are forcing producer take-back, turning Safisha's hubs into critical, licensed infrastructure.

Lake Victoria Funding: East Africa Community declarations have unlocked international cleanup funding.

Carbon Market Entry: Documented baselines allow Safisha to monetize verified carbon reductions.

Regional Expansion: The Cross-Border Node

The Economics:

Cleaned plastic flakes are exported as premium commodities.

Safisha acts as a regional cross-border supply node, moving approximately 10 tonnes per month at premium rates of KES 40–50/kg.

Vision 2030: Scaling the Architecture

Making circular economy infrastructure as ubiquitous as mobile money.

10

Buy-Back
Centres
established.

20,000

waste pickers
nationally
networked.

100,000

tonnes of plastic
recovered.

1 Million

people positively
impacted.

Projected plastic revenue scaling from
KES 4.4M to **KES 34.9M** by Year 3.

Leadership & Strategic Ecosystem

Norah Gakii Nyagah

Executive Director

- Built one of Western Kenya’s fastest-growing circular economy initiatives from zero to a 10t/week facility.
- 10+ years experience in HR, project management, and securing KES 15M+ in donor grants.
- Recognized by the Kisumu County Government for measurable environmental impact.

Ecosystem of Trust	
Funding & Capacity:	New Life Mission Aid (NLMA), GIZ, VSO.
Governance & Access:	Kisumu County Environment Directorate.
Commercial Off-takers:	Mr Green Africa, RETEC Fibre, KEPRO.

The Investment Opportunity

Use of Funds:

Capital will be strategically deployed to:

1. Scale BBC infrastructure into Mombasa and Nairobi.
2. Implement simple balers at main hubs to drastically improve logistics efficiency.
3. Develop a digital platform/app for waste pickers to track prices and collection points.
4. Advance plastic pelletizing capabilities to capture higher margins.

**Join us in building a
highly defensible,
profitable business that
leaves a generational
environmental legacy
for Kenya.**
